

eFONA* in CICO situation

According to DAS 2015 guidelines

Compact and lightweight set

ScalpelCric

Set for surgical cricothyrotomy according to the scalpel technique

/ ScalpelCric

ScalpelCric is a surgical set for cricothyrotomy according to the scalpel technique. The set has been developed to match the latest recommendations from the DAS (Difficult Airway Society) 2015 Guidelines.

Based on the simple description of "**stab, twist, bougie, tube**", the ScalpelCric is meant to facilitate the execution of eFONA (emergency Front Of Neck Access) in a CICO situation (Cannot Intubate – Cannot Oxygenate). The set is packed in a specific sterile pouch with each component organised in the order of use. This can be important at the critical time of the procedure.

Use

1. Stab

2. Twist

3. Bougie

4. Tube

Features

Bougie

- Low friction surface for easy railroading of the tube
- Angled and atraumatic tip
- Centimetre markings to control insertion depth
